Visitor Management System: COVID Registration Check-In

Secure and Fast COVID Status Visitor Registration

Easy for your visitors, Easy for HR to confirm, Easy to deploy, Easy legal compliance

As new government regulations and internal health policies are introduced, facilities have to adapt to changing requirements and need an efficient and secure means to collect health status details from their staff, employees, and others that are regularly at the facility or campus. However when it comes to visitors, contractors or other infrequent visitors, collecting this information is a challenge. Once onsite they should be easily checked in, located for emergencies or alerting if entering unauthorized areas, and be notified if they've been exposed while on campus.

A complete registration system should be able to accommodate visitors registering on site or pre-registering prior to arrival, and should be able to flexibly support health status reporting protocols.. The ideal system should be privacy-preserving, secure, and provide HR with a means to review visitor details and make an immediate determination, and enable security staff with a means to check people in. Finally the system should be able to locate visitors for emergencies, for COVID exposure notification and provide alerts when they are not at the authorized location. All this without requiring an app of any sort to facilitate compliance.

Kiana Analytics' XPRT Platform provides a privacy-protecting solution to register all your visitors on site or in advance through our web-based solutions that require no apps to be installed first. The registration system provides new capabilities to request all visitors to upload their COVID vaccination status as part of their registration process.

No App Needed: Private, Secure and Scalable Registration

Whether a crowd, a contractor, or just a parent stopping by, our easy to use solution, provides your staff with a means to register anyone, request required information or upload documents as needed. The system is flexible enough to adapt to changing needs for registration per event type, and provides secure upload of sensitive data that HR, Health and Security may need to validate a person's status. You can select to request upload of COVID vaccination status and authorized health personnel can quickly check the status to determine if a visitor is allowed in.

Security staff can receive automatic notifications when a permitted visitor leaves their approved location, or in case of emergency, the visitor can be quickly located through our visitor management dashboard. And post-COVID, the system continues to deliver ROI by adapting to your new visitor management needs.

How it works:

- A visitor is provided a registration system link from an invitation email or mailer, from your website, or if already on site, by scanning a QR code posted at your entrance.
- The link launches your registration page for the event selected, with simple instructions if necessary for the visitor to upload their documentation and register.
- Your health personnel can log into a secure portal hosted behind your firewall, to review the registration and documents submitted and determine immediately to allow or disallow the visitor.
- Upon arriving the visitor is prompted to log into the network you've assigned for the event in order to complete registration and receive an authorization QR code to their phone for presentation upon check in.
- Security staff can scan the code on demand to view their visit details and approval status.

Extend your Personnel Health Service to all your visitors too!

Kiana's XPRT Health module provides anyone at your facility a means to easily report their COVID status as it changes and permits your health personnel to run immediate contact tracing for all reported COVID instances. Our exposure notification system automates search and notification for all individuals and spaces that have been exposed per CDC guidelines over the last hour, day and week up to 14 days prior. Our visitor registration system provides this same level of notification and contact tracing for any visitor that may have been exposed when they were on site. Privacy and security for these details are treated the same as with your own staff

Visitor Management System: COVID Registration Check-In

Kiana Visitor Management System Benefits:

Private and Secure: Visitors do not have to show their vaccination details once registered. Their QR code provides proof that they are permitted to attend. Personal data stays behind your firewall. Kiana only uses encrypted mobile device signatures for our services, we never receive any unencrypted data. Security is paramount for us - we are GDPR and CCPA compliant. Only your own staff, with appropriate permissions can decrypt information for their use.

Customizable: Our Registration system is part of the XPRT Platform and leverages the same privacy and security features of the platform. The system provides you the ability to select the type of visitor registration details you require, long term registration or limited time duration events can be supported as well as location specific or cross-site visitor needs.

Easy to Use: Upon creating an even registration, a link and QR code are created for you to share with your guests. Post it on your website for sporting events, or attach it to an email or a mailed invitation. You take ownership of how and what information is requested for a given event. Even visitors that just pop in unannounced can also use the system before they're allowed on campus.

Scalable and ROI - friendly: Kiana's Visitor Registration system is part of our XPRT Intelligent Site Management Platform. As such it leverages other features to improve the operational efficiency and bring true smart site capabilities to Health/ HR, Security, Operations and Facilities stakeholders. The XPRT platform is a cloud based system that grows with your needs and leverages your existing network infrastructure without ever needing to deploy any hardware or software on any device.

Integrated with Kiana's XPRT Platform: The XPRT platform supports COVID contact management and automates exposure notification to any exposed person on your site. The platform also provides facilities with immediate access to areas that need cleaning. Additional XPRT modules provide intelligent Visitor and Employee registration/ management, smart asset management, security alerts, Geo-Zone tools to create customized permissions for who, what and when can be in a space, authentication interface to your identity management system, site optimization with zone capacity to evaluate how space is used and discover inefficiencies.

Use a visitor's own device or use bluetooth badge/tags: The XPRT platform can use information from a visitor's own smartphone or your staff can provide bluetooth badges as desired. (your network should support bluetooth signals as well as WiFi, or use low cost bluetooth sensors to augment wherever needed to fill in observation gaps as needed).

Kiana Analytics leverages real-time data reported from your existing network, of mobile device wifi and bluetooth signatures. This data is encrypted and securely analyzed to identify presence and movement of people and assets based on their mobile phones, badges and other wearables or tags to enable smart facility services for visitors and staff. Our XPRT platform does not require deployment of hardware or software to provide services to Security, Operations, Facilities and HR.
